/note="vector: pSPORTI: Site_1: Mlul; Site_2: Not1; mRNA was prepared from human testis of a 27 years old man. CDNA was prepared using a 15mer oligo dr anchored by two degenerated bases at 11s 3'end and containing a Not1 site at 1ts 5'end. The CDNA was cloned between 5all and Not1 sites of pSPORTI. The Mlul:5all fragement come from the adaptator used for the cloning. The 3' end is at the Not1 site. CDNA corresponding to abundant species were eliminated from this library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Eutheria; Primates; Catarrhin; Hominidae; Homo.

/note="Vector: pSPORT1; Site_1: Mlu1; Site_2: Not1; mRNA
was prepared from human testis of a 27 years old man. cDNA
was prepared using a 15mer oligo dr anchored by two
degenerated bases at its 3'end and containing a Not1 site
at its 5'end. The cDNA was cloned between Sall and Not1
sites of pSPORT1. The Mlu1-Sall fragement come from the
adaptator used for the cloning. The 3' end is at the Not1
site. cDNA corresponding to abundant species were
eliminated from this library."

/note="Vector: pSpoyr1; Site_1: Mlu1; Site_2: Not1; mRNA
was prepared from human testis of a 27 years old man. cDNA
was prepared using a lismer oligo dr anchored by two
degenerated bases at its 3'end and containing a Not1 site
at its 5'end. The cDNA was cloned between Sall and Not1
sites of pSpoyr1. The Mlu1-Sall fragament come from the
adaptator used for the cloning. The 3' end is at the Not1
site. cDNA corresponding to abundant species were
eliminated from this library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4;
Email: guellaen@infoblogen.fr
This sequence derives from a clone which was selected from the cDNA
11brary - Testis 5 - using a repeat of 14 CAG as probe
Seq primer: M13 reverse.
